

Group Name:

Module Code: BENG0095

General Comments:		
1. Methodology		Mark (%)
The methodology is as simple as could be or is missing entirely. The wrong type of algorithm may have been used and demonstrates a lack of understanding of the problem.	The methodology is novel and draws in extra information in an intelligent way. The description of the methodology displays a keen understanding of the problem.	
2. Evaluation Strategy		
The evaluation strategy is either missing or inappropriate. Errors in the strategy have gone unnoticed leading to a biased model.	Excellent evaluation strategy that covers all the bases and is well justified.	
3. Presentation of Results		
No attempt has been made to present and discuss the results. They are difficult to understand and no attempt has been made to interpret them.	The results are well interpreted revealing insights into the data and the approach. Excellent use of statistics, tables, and graphs.	
4. Interest of Approach		
No interest or novelty. The approach is simply a like for like copy of an existing solution.	A novel approach that demonstrates an excellent grasp of the problem.	
5. Format, structure, references, and clarity of writing/code		
The submission was in the wrong format or large parts were missing. No references and the writing and code quality are poor.	Superbly laid out notebook with clear logical steps. The notebook runs and the code and surrounding text are well written and easy to understand. The references show an impressive level of background reading.	
Overall Mark		

Range	Descriptor
90-100% Exceptional	<ul style="list-style-type: none"> Methodology is of publishable quality. Developed new approaches to tackle the problem Evaluation is constructed in such a way as to remove any positive bias. Parameters have been correctly set and an appropriate re-sampling method has been used and justified. Goes well beyond what was expected Results are clearly presented and go into exceptional detail. There is brilliant use of tables and graphs and the surrounding text is excellently written and shows real insight into both the data and the approach The approach is completely novel and analyses data in an interesting and novel way There are no flaws in the spelling, the references show a good range of background reading, and the writing and code is of publishable quality
80-89% Outstanding	<ul style="list-style-type: none"> A methodology that shows novelty and is clearly described. Multiple sources for algorithms are used and the model brings together multiple innovative strands The evaluation strategy compliments the methodology and is logically explained and justified. All relevant parameters have been estimated Results are excellently displayed with appropriate visualisations and reporting used. The surrounding text shows an excellent level of critical understanding There is novelty and innovation in the approach. Impressive research of external methods Very few flaws in the writing, layout, references (of which there are a good amount), and code
70-79% Excellent	<ul style="list-style-type: none"> An impressive methodology that uses multiple sources of algorithms. The reason for using them is well justified and advanced methods have been used Excellent evaluation strategy with all the basics well covered Results are clearly presented and some attempt at interpreting the results have been made The approach is interesting and the reasons justifying the approach are well made Very good write-up with very few mistakes. Code is generally well commented and there are some references displaying background reading
60-69% Good	<ul style="list-style-type: none"> A nice methodology is presented and optimisation of the parameters has been demonstrated. The optimisation is appropriate and well justified The evaluation strategy is logical and well reported but might contain some errors Results are all present but perhaps not formatted in the optimal way (i.e. tables and graphs not properly used) The appropriate use the supplied data for modification/optimisation of the core model displays novelty and interest Well written with good code and structure. Some references
50-59% Satisfactory	<ul style="list-style-type: none"> The methodology is appropriate but poorly described. No engineered data sources have been used An evaluation strategy has been employed but there are flaws in the estimation of parameters The results are generally well presented but some key information is missing There is some novelty to the approach but it is little more than training a standard classifier Write-up is generally OK but there are a few spelling errors. Some references, adequate code and comments
40-49% Passable	<ul style="list-style-type: none"> A methodology is presented but it does nothing more than train on the raw features in the training set The methodology is evaluated but no appropriate re-sampling methods are used or there are errors in the approach Results are poorly presented with key information missing There is no novelty to the approach Some flaws in the write-up with parts missing, no references, or poorly written documentation and code
20-39% Unsatisfactory (Clear fail)	<ul style="list-style-type: none"> An attempt at a methodology has been made but it does not work No real attempt at an evaluation strategy or there are major flaws in the approach Results have not been properly presented or there are major errors/omissions No novelty to the approach Poorly written documentation and code. No references
0-20% Hopeless (Unacceptable fail)	<ul style="list-style-type: none"> Methodology is missing Evaluation strategy is missing Results are missing The approach has been copied from another source without reference Seriously flawed write-up with little to no documentation, little to no code, or submitted in the wrong format

Addendum: Oral Assessment for L7 (MEng) students.

Score adjustment factor	Oral examination achievement criteria
1.1-1.2	<ul style="list-style-type: none">• Exemplary understanding of machine learning methods• Ability to explain all the methods employed in the project, including detailed explanation of the effect of parameters and test/training set selection• Deep understanding of the underlying maths, including derivation of relevant formulae• Ability to extrapolate, consider further methods and demonstrate intuition as to which methods perform best
0.9-1.1	<ul style="list-style-type: none">• Understanding of machine learning to a higher level.• Understanding of the methods employed in the project – explanation of the advantages/disadvantages• Ability to explain other methods and their relative merits• Understanding of the underlying maths, including derivation of the most important results
0.7-0.9	<ul style="list-style-type: none">• Understanding of machine vision of a similar level to L6.• Understanding of the methods employed in the project – explanation of the advantages/disadvantages• Ability to extrapolate and consider further methods and demonstrate broad intuition of what methods work well for what problems• Ability to offer some explanation of the underlying maths.
0.5-0.7	<ul style="list-style-type: none">• Superficial understanding of machine learning methods• Only general or partial explanation of the methods employed in the project• Limited understanding of wider algorithms• Understanding of the underlying maths is limited or lacking
